

Abstract

A roofing material is provided, which is superior to workability when the roofing material is laid on a roof bed or the like and is hard to decrease waterproof of a roof. An approximately planar roofing material body 1 is arranged adjacent to another roofing material body 1. A side end part of the roofing material body 1 is overlapped and laid to the another roofing material body 1. The roofing material body 1 is provided with an inclined piece 2 formed at a side end edge part 1a of the roofing material body 1 so as to be inclined downward. Further, a tip of the inclined piece 2 (an inclined-piece tip 2a) of the roofing material body 1 is formed so as to abut on a front face bent downward of the another roofing material body 1 laid to a downside of the roofing material body 1.
