(54) Title: CONTAINER HOLDER WITH FASTENERS

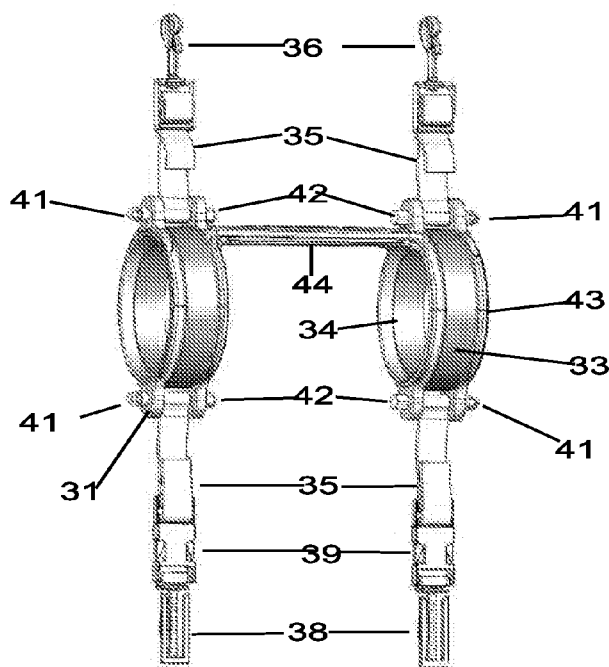

Fig 1-B

(57) Abstract: One design embodiment of a holder for a container which may be comprised of a connector band (44) that connects to holder band eye brackets (31), in which strap bolts (40) that are held in place by strap bolt heads (41) and strap bolt nuts (42) retain fastener straps (35) that connect through release buckles (39) to fasteners (36, 38). The container may be attached to the user or a host device using a variety of easily configurable methods, as required by the intended use, including but not limited to the use of fasteners with integrated strap adjusters (36) or fasteners that attach the holder to belts, straps or webbing, by the use of fasteners (38) which include direct attachment points to integrated release buckles (39). The design embodiment allows easy attachment, use and deployment of containers in a variety of environmental conditions and situational uses, including but not limited to the carrying of gas supplies for underwater divers.
