

ABSTRACT

Disclosed in embodiments of the present disclosure are a method and apparatus for establishing a multimedia call, and an electronic device. A specific embodiment of the method comprises: when a first terminal where a user logs in to a target application is in a state of a multimedia call, in response to the triggering of a target multimedia call to be established that
5 is associated with the user, determining whether a second terminal is in a multimedia call according to terminal identification information of the second terminal where the user logs in to the target application; and in response to the second terminal being not in a multimedia call, establishing the target multimedia call on the basis of a call pick up operation executed by an
10 initiated party of the target multimedia call. According to this embodiment, the user conducts a multimedia call by means of the second terminal and the first terminal at the same time.
