(54) Title: AN ADAPTOR FOR A MEDICAL CONTAINER, A MEDICAL CONTAINER COMPRISING SAID ADAPTOR, AND
A METHOD FOR MANUFACTURING SAID ADAPTOR

Fig. 1

(57) Abstract: This adaptor (1) comprises a proximal part (2) configured to be secured onto a distal tip (102) of a medical container (100), a distal part (4) configured to receive said connector in order to establish a fluid communication between the distal tip (102) of the medical container (100) and the connector, said distal part (4) comprising a window (60) extending through a lateral wall (6) of the adaptor. The adaptor further comprises an indicator (8) that is movable between a first position and a second position wherein the indicator (8) outwardly extends relative to the first position. This indicator (8) comprises blocking means configured to block a movement of the indicator (8) from said first position to the second position, and a cam portion (82) configured to be pushed outwardly by the connector when the connector reaches a predetermined position in the adaptor (1), thereby unblocking and pushing the indicator (8) to the second position in order to provide an end user with a visual and tactile indication that the connection between the connector and the adaptor (1) is terminated.
