

Abstract

A method for indicating a resource includes configuring a first Control Resource Set Zero (CORESET#0) on a first time-frequency resource, and configuring a second CORESET#0 on a second time-frequency resource, in response to allowing a first terminal supporting a bandwidth greater than or equal to a preset bandwidth to access and allowing a second terminal supporting a bandwidth less than the preset bandwidth to access; and broadcasting a first index, to indicate the first time-frequency resource to the first terminal and to indicate the second time-frequency resource to the second terminal.
