FIG. 1

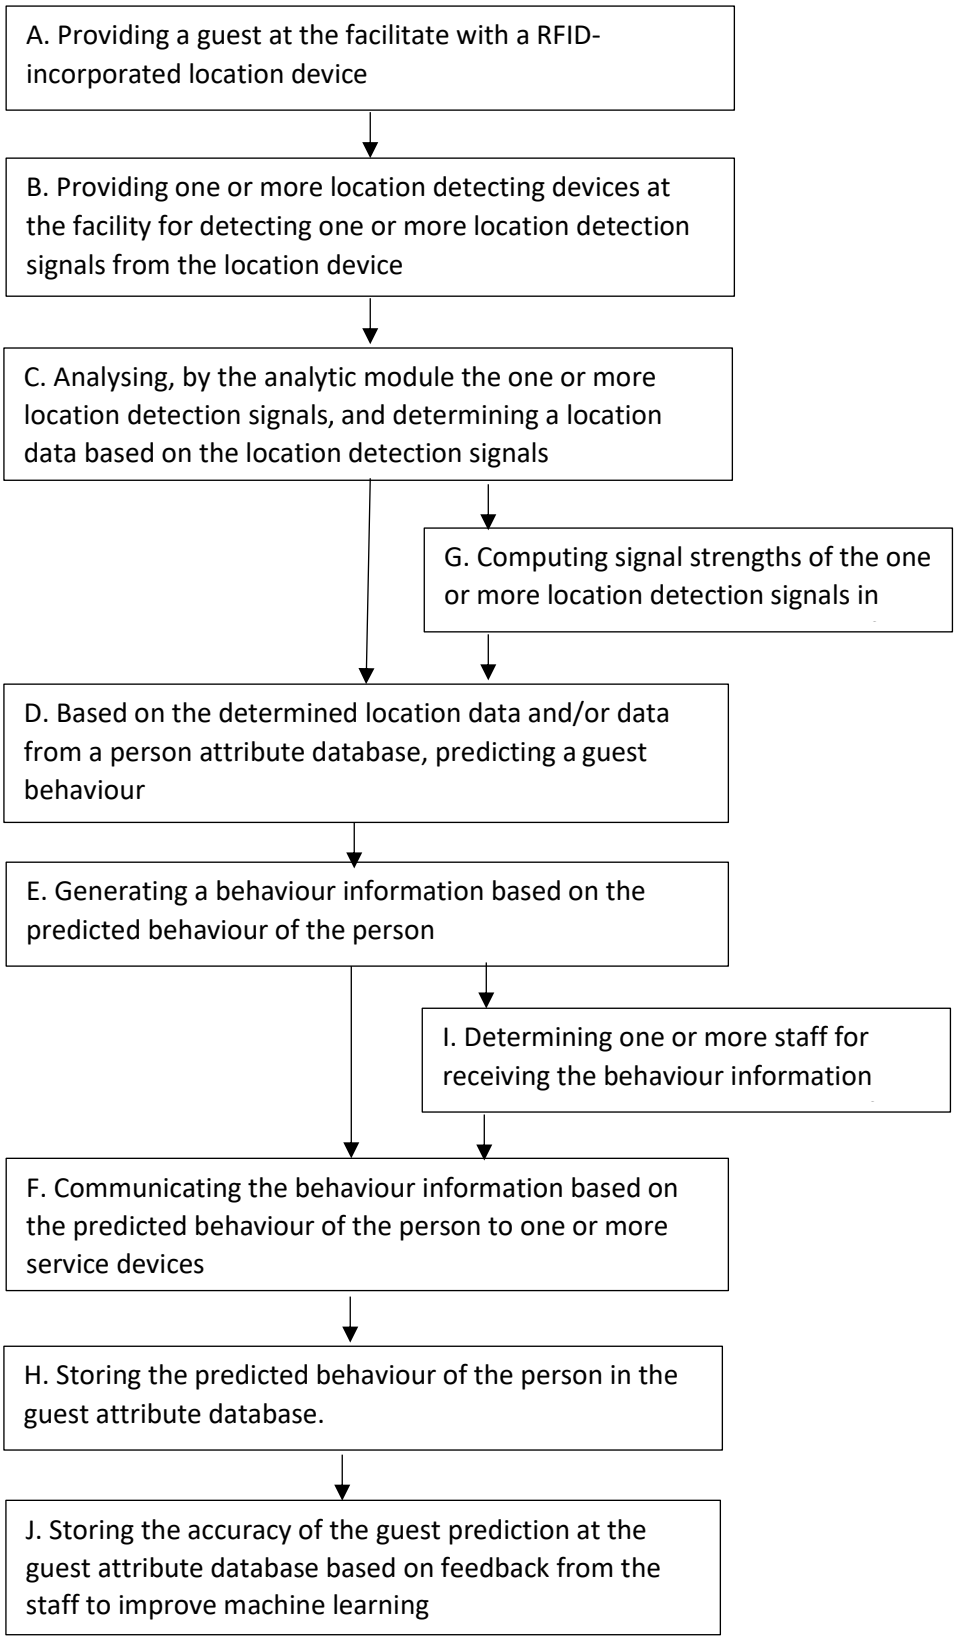

A. Providing a guest at the facilitate with a RFID-incorporated location device
B. Providing one or more location detecting devices at the facility for detecting one or more location detection signals from the location device
C. Analysing, by the analytic module the one or more location detection signals, and determining a location data based on the location detection signals
G. Computing signal strengths of the one or more location detection signals in
D. Based on the determined location data and/or data from a person attribute database, predicting a guest behaviour
E. Generating a behaviour information based on the predicted behaviour of the person
I. Determining one or more staff for receiving the behaviour information
F. Communicating the behaviour information based on the predicted behaviour of the person to one or more service devices
H. Storing the predicted behaviour of the person in the guest attribute database.
J. Storing the accuracy of the guest prediction at the guest attribute database based on feedback from the staff to improve machine learning

FIG. 2
