(54) Title: SWIPE MOUSE

(57) Abstract: A mouse pointing device for use with a personal computer includes a motion sensor serving to relay positional data from the device to a computer to effect motion of a graphic pointer on a monitor. A printer located within the housing receives print image information from the computer. The printer is configured to print an image on print media external to the device as the device traverses the media. The motion sensor provides positional data of the device relative to the print media to the printer during the printing operation.
