

DEVICES AND METHODS FOR APPLYING LABELS ON PRODUCTS

Abstract

- 5 The present disclosure generally relates to devices and methods for applying labels on products. A first device comprises a first surface connectable to a mechanical arm for displacement towards a product with an oblique labelling surface. The device comprises a second surface holding a label to apply on the oblique labelling surface. Flexible sections between the first and second surfaces are resiliently and differentially
- 10 compressible at peripheral portions thereof by the oblique labelling surface. This conforms the second surface to the oblique labelling surface to thereby apply the label.
