(54) Title: SYSTEM AND METHOD FOR VIDEO FRAME MARKING

Figure 3

(57) Abstract: There is provided a system and method for video frame marking. It is preferable that a tagged video frame is visually perceptible in the set of chronologically ordered video frames shown in the display. The selection of each video frame preferably causes playback of an excerpt of the video with a duration of the common predetermined interval. The video frame may denote a scene from a portion of the excerpt of the video, such as, for example, start, middle and end. It is advantageous that the excerpts of the video of each tagged video frame is combined using the user interface to generate a concise representation of the video. The concise representation of the video may be in a form where excerpts of the video of each of the tagged video frames are played back at a normal rate while excerpts of the video of each of other video frames are played back at an accelerated rate.
