

ABSTRACT

BLOOD COLLECTION DEVICE

A blood collection device (10) includes a housing (12),
5 a partition wall (34) that partitions an inside of the
housing (12) into a first chamber (24a) and a second
chamber (24b) located below the first chamber (24a), a tray
(16), a rocking mechanism (18), and an
attachment/detachment portion (20). An opening portion
10 (36) that interconnects the first chamber (24a) and the
second chamber (24b) and into which the
attachment/detachment portion (20) is inserted is formed in
the partition wall (34). The blood collection device (10)
includes a wall structure (50) that prevents a foreign
15 article from entering the second chamber (24b) from the
first chamber (24a) through the opening portion (36).
