

[ABSTRACT]

An intersecting track (1) includes: two main tracks (2A and 2B) on which a vehicle (100) runs; a pair of first guide portions (4) that are disposed in the main tracks (2A and 2B) and guide a pair of first guide wheels (111) on both side parts of the vehicle (100) on an outside thereof; a pair of crossover tracks (3) that are disposed over the main tracks (2A, 2B) to intersect each other and enable the vehicle (100) to run between the two main tracks; a second guide portion (5) that is disposed inside each of the pair of crossover tracks (3) and guides a second guide wheel (112) disposed under the vehicle (100); a switching portion (6) that switches a direction of the vehicle (100) to a direction along the main tracks (2A and 2B) and a direction along the crossover track (3); and a switching device (7) that is disposed in an intersecting area of the second guide portions (5) in the pair of crossover tracks (3), selectively switches a direction to a direction along one of the second guide portions (5) and a direction along the other of the second guide portions (5), and guides the second guide wheel (112) in any one of the directions.
