

Printing apparatus

ABSTRACT

- 5 The invention relates to a printing apparatus (1) for printing substrates (20), in particular solar cells, wafers, circuit boards or the like, having at least one printing device (2,3), which is assigned at least one movable printing table (8_1,8_2,9_1,9_2), having a conveyor track (4) along which the substrates (20) can be moved, and having a transport device for transporting the substrates from the conveyor track (4) to the at least one printing device (2,3) and back.
- 10 According to the invention, the transport device has at least one transport pendulum (8, 9) which can be pivoted or rotated about a pendulum axis (10, 11) and which has the printing table (8_1, 8_2, 9_1, 9_2) at at least one end at a distance from the pendulum axis, wherein the printing table (8_1, 8_2, 9_1, 9_2) can be pivoted by the transport pendulum (8, 9) into a first position assigned to the printing device (2, 3) for a printing operation and into a second position lying in
- 15 the conveyor track (4), wherein the respective printing table (8_1,8_2,9_1,9_2) has a conveying device (13) which also forms the conveyor track (4) in the second position of the printing table (8_1,8_2,9_1,9_2).
