(54) Title: CONTAINER AND LIFTING MEANS FOR AN ARTICLE

FIG. 1

(57) Abstract: The present invention relates to a container (1) comprising a box (2), and a lid (3), wherein a lifting means (41) for articles (42), in particular smoking articles, is provided in the container (1). The lifting means (41) comprises a lifting panel (45) which is hingedly connected via a first hinge line (44) to the inside of a bottom wall (4) of the box (2), and a back-folding panel (47) depending from the lifting panel (45) via a second hinge line (46). The back-folding panel (47) is adapted to transfer a movement of the lid (3) to the lifting panel (45), such that the lifting panel (45) is lifted, when the lid (3) is moved in the open position. The lifting panel (45) further comprises a holding means with a cut-out (48) provided in the lifting panel (45), wherein the cut-out (48) is adapted to at least partially receive the article (42). The present invention further relates to a lifting means (41) and the use of a lifting means (41).
