(54) Title: INFORMATION DISPLAY DEVICE WITH ADAPTIVE SCROLL SPEED

(57) Abstract

An information display device receives, at its input (1a, 1b), messages in the form of bursts of information units. The display device comprises presentation means (2), coupled to the input, comprising a display area (2.1) for displaying said messages. The presentation means can scroll the information units through the display area with a specific scroll speed. The information display device further comprises a control signal generator (3) that generates a control signal which is derived from the average rate at which information units are received. The presentation means (2) control the scroll speed in response to the control signal.
