

VOICE INTERACTION METHOD AND APPARATUS

ABSTRACT

This application provides a voice interaction method and apparatus. The voice interaction method may be applied to the field of terminal technologies. The voice interaction method includes:
5 controlling a display apparatus to display an interface, where the interface is a first-level interface;
obtaining a voice instruction of a user; and controlling the display apparatus to display another interface corresponding to the voice instruction, where the another interface is an interface above a second level. In this application, the user may view an interface with a deep nesting level by giving the voice instruction. This helps improve voice interaction experience of the user.
