(54) Title: SEMI-FINISHED PRODUCT COMPRISING A PLURALITY OF CONTACT PROBES FOR A TESTING HEAD AND RELATED MANUFACTURING METHOD

(57) Abstract: It is described a manufacturing method of a semi-finished product (15) comprising a plurality of contact probes (10) for a testing head of electronic devices, the method comprising the steps of: - providing a substrate (11) made of a conductive material; and defining each of the contact probes (10) by removing material from the substrate (11) so that each of the contact probes (10) turns out to be anchored to the substrate (11) by at least one bridge of material (13), that step of defining the contact probes (10) comprising a step of laser cutting, in correspondence with a contour of the contact probes (10) and of that at least one bridge of material (13).
