(54) Title: CALL-GIVING DEVICE, ELEVATOR SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT

(57) Abstract: The invention relates to a destination call-giving device (1) for giving destination calls in an elevator system, which comprises means available to a user for selecting a destination floor from a plurality of floors that are in a certain sequence, and an output for communicating the selected destination floor to the control system of the elevator system, which means for selecting a destination floor comprise a touch-sensitive display (3) forming a user interface for presenting to the user information related to the selection of a destination floor and for receiving the input of the user. The destination floor is arranged to be selectable by the user from the aforementioned plurality of floors by moving a touch-sensitive point on a touch-sensitive display (3). The invention also relates to an elevator system, and to a method for giving a destination call, and to a computer program product.
