

Working device
with at least one drive unit

Abstract

The invention relates to a working device (1), which comprises at least one drive unit (13), which is slidably supported on a guide rail (16) by means of a guide carriage (34). The guide carriage (34) is integrated into the drive unit (13) and has a main carriage body (33), which overlaps the guide rail (16) in the manner of a slider and which is an integral part of the drive housing (24) of the drive unit (13).
