ABSTRACT

5 A UIM 12 having a plurality of storage areas is built into or
mounted in a mobile terminal 11. A contents server 19, upon receipt of a
distribution request from the mobile terminal 11, distributes a program or
data used at the time of program execution or the program itself through a
network including a radio network. This program and the data or the
program itself are stored in the storage area of the UIM 12 and not through
the control unit of the mobile terminal 11.
