(54) Title: MOLECULAR LIGHT EMITTING DEVICE

(57) Abstract: A light emitting device comprises a gate electrode (101), a channel (103) comprising a molecule for electrically stimulated optical emission, wherein the molecule is disposed within an effective range of the gate electrode (101), a source (104) coupled to a first end of the channel injecting electrons into the channel, and a drain (105) coupled to a second end of the channel injecting holes into the channel.
