

**ABSTRACT****A urine guide device for women**

- 5 The present invention relates to a urine guide device which enables women to urinate in a standing position. The device comprises a disposable guide member (40) and a reusable support member (20) to hold the guide member (40) in place. When in use, the urine guide device of the present invention is adherent to the vulva region in order to receive the urine and to direct the urine away from the
- 10 body of the user.
