

ABSTRACT OF THE DISCLOSURE

Disclosed is an apparatus for cutting CSP plates into individual pellets to put them on carrier trays for transportation.

5 It comprises: a jig rack for storing of jigs for holding CSP plates; taking-in and out table means for taking a selected jig in the jig rack and for taking a selected jig out from the jig rack to transport it to an area in which CSP plates are brought and laid; a cassette table on which a CSP plate cassette is put; means for

10 taking a selected CSP plate out from the cassette; means for putting the so taken-out, selected CSP plate on an associated jig, which is laid on the table means; first transporting means for transporting the CSP plate-and-jig combination from the taking-in and out table means to a working table; means for cutting the CSP

15 plate with a cutting blade, the CSP plate-and-jig combination being held on the working table; second transporting means for transporting the jig holding its CSP plate cut into individual pellets from the working table to a washing table; third transporting means for transporting the so washed cut CSP

20 plate-and-jig combination from the washing table to a pellet picking-up table; means for picking up individual pellets from the pellet picking-up table to put them in carrier trays, which are laid in a pellet transferring area; and fourth transporting means for transporting empty jigs from the pellet picking-up table to

25 the jig taking-in and -out table means.
