

## ABSTRACT

**NESTABLE CONTAINER WITH PARTITIONS**

- 5        A nestable container having partitions of a height exceeding about 70%  
of the depth of the container, substantially equal to or greater than the depth of  
the container. The container has a base panel, walls connected to the base  
panel, flaps along the longitudinal exposed edges of the walls, slots in the base  
panel and walls to provide nestability, and partitions to separate the holding  
10    space of the container into compartments.
