

Advertising on Table Surface and Method of Making

Abstract

A method of making advertisement media for table surface (1) is disclosed. A table surface (1) comprising a least one piece of substrate (2) bearing designs or images covered with one layer of laminate (3), with one or more layers of laminate (4) that may bear indicia. The substrate (2) and laminate (4) are applied in a manner to minimize air trapped between the upper surface of the table (1), the substrate (2), and the laminate (4) layer. The laminate layers (3, 4) will be applied such that the substrate is visible through the laminate layers (3,4). The table surface (1) may form part of a table or may be incorporated into a bar or counter.
