

CONNECTOR TERMINAL AND METHOD OF ASSEMBLING THE SAME

ABSTRACT OF THE DISCLOSURE

A connector terminal with a unit-mountable connector of that includes a connector
5 body having an adapter engagement end and a unit engagement end, and a mounting member
therebetween for mounting the connector body to a unit. An insert extends through the
connector body and has an inner bore extending between a cable interface end and a unit
interface end, and a connector body interface portion between the ends. One or more double-
sided contacts are received in the insert. The double-sided contact has one end that is a cable
10 termination end configured to terminate to a conductor of a cable and an opposite end that is a
unit termination end configured to terminate to a conductor of the unit. The unit-mountable
connector is adapted to mate with a cable sealing adapter. The cable sealing adapter is devoid of
contact.
