

Abstract

Measurement system and measurement method for measuring
video processing quality

5

A measuring system for measuring video processing quality
of a device under test (4) comprises a measuring device
(2) comprising transmission means (11) set up for
transmitting a video to the device under test (4). The
10 device under test (4) is set up for receiving the video
and displaying it using a display comprised by the device
under test (4). The video comprises at least a first
barcode to be displayed for a first duration. The
measuring system (1) comprises a barcode reader (3) set up
15 for reading the first barcode from the display of the
device under test (4). The measuring system (1) is set up
for determining the video processing quality of the device
under test (4) based upon measuring results of the barcode
reader (3).
