

ABSTRACT

PORTABLE ELECTRONIC DEVICE AND IC CARD

5 A portable electronic device has a confidential data storage, a disclosure
method selection unit and a disclosure processing unit. The confidential data
storage stores confidential data. The disclosure method selection unit selects
disclosure method information indicating a data disclosure method for disclosing
the confidential data stored in the confidential data storage, based on user
10 identification information for identifying a user received from an external
apparatus. The disclosure processing unit generates output data in which at
least a portion of the confidential data is hidden in accordance with the disclosure
method information selected by the disclosure method selection, and transmits
the output data to the external apparatus.
