ABSTRACT

The present disclosure relates to an information reporting method and apparatus, a bandwidth part (BWP) based operating method and apparatus, user equipment, a base station and a computer readable storage medium. The information reporting method includes: determining that a random access problem occurs; and reporting, to a base station, a BWP on which the random access problem occurs. According to examples of the present disclosure, by determining that the random access problem occurs and reporting the BWP on which the random access problem occurs to the base station, the base station may determine the BWP on which the random access problem occurs.
