

ABSTRACT

INTERIOR AIR CONDITIONING DEVICE

5 A carbon dioxide sensor (92) measures the carbon dioxide concentration of inside air.
An inside air control system (30) controls the carbon dioxide concentration of the inside air
based on a measured value obtained by the carbon dioxide sensor (92). If the measured value
obtained by the carbon dioxide sensor (92) returns to a predetermined normal range after
falling outside the normal range, the controller (110) of the inside air control system (30)
10 performs a determination operation. The determination operation is an operation for supplying
outdoor air to the carbon dioxide sensor (92) to determine whether or not the carbon dioxide
sensor (92) is normal.
