

ABSTRACT

A drain nozzle fixation device for fixing a drain nozzle which stirs desulfurization wastewater discharged from a desulfurization device disposed on a hull and mixes the
5 desulfurization wastewater with seawater includes: a hull outer wall having an opening below a waterline; and an outer-wall-side pipe having a cylindrical shape with an interior space throughout in an axial direction and openings on both ends in the axial direction. A first end of the outer-wall-side pipe in the axial direction is integrally fixed to an opening edge of the hull outer wall, and the opening of the first end communicating with the outside of the hull
10 outer wall. A second end of the outer-wall-side pipe in the axial direction is positioned inside the hull outer wall. The drain nozzle is disposed inside the outer-wall-side pipe.
