

A B S T R A C T**METHOD FOR GENERATING AND DISPLAYING A SECURITY CODE FOR A
PAYMENT CARD, PAYMENT CARD**

- 5 A payment card comprises a display device arranged on a face of the
payment card, the display device comprising a field for displaying a security code
for card verification operations carried out by a card verification server. The
method comprises the operations of:
- displaying, in the field of the display device, a first value of the security code
 - 10 during a first time period,
 - displaying, in the field of the display device, a second value of the security
code during a second time period that follows the first time period, the first and
second time periods being of different durations.
