WO 2023/037128 A2

(54) Title: NETWORK CONNECTIVITY

(57) Abstract: A method for a host device to obtain cellular network connectivity is provided which includes performing a first process at a first time, the first process comprising using non-cellular data connectivity to download a profile data structure, the profile data structure comprising a set of two or more International Mobile Subscriber Identities, IMSIs, and authentication data; and performing a second process at a second time, the second time being after the first time, the second process comprising selecting an IMSI from the set of IMSIs; and attempting to register with a cellular network using the selected IMSI and the authentication data to obtain cellular network connectivity. A method to enable a host device to obtain cellular network connectivity, host device, non-transitory computer-readable storage medium, network element for authenticating a host device to a cellular network, and computing system communicatively coupled to a cellular network according to the method, are also described.
