Abstract of the disclosure:

α-L-Rhamnosidase for obtaining rhamnose, a process for its preparation and its use

The invention relates to α-L-rhamnosidase, which catalyzes the cleavage of the bond between terminal rhamnose and the aglycone of rhamnose-containing glycosides, a process for preparing it by biotechnological means, and its use for preparing L(+)-rhamnose (6-deoxy-L-mannose).
