(54) Title: SYSTEM AND METHOD FOR MONITORING QUEUE CHARACTERISTICS AND INITIATING ADJUSTMENTS

FIG. 3

(57) Abstract: A queue control system controls a queue structure of a queue in an amusement park. The queue control system includes a controller and a queue structure control associated with the queue structure. The controller receives, from an input device that monitors a queue characteristic of the queue, data feedback indicative of the queue characteristic. The queue characteristic is indicative of a queue length, queue wait time, queue rate, or queue throughput. The controller also outputs a control command based on the data feedback. The queue structure control receives the control command and changes at least one aspect of the queue structure based on the control command.
