(54) Title: SYSTEM FOR GENERATING AN ALERT FOR A SYSTEMIC INFECTION

(57) Abstract: A system for generating an alert for a systemic infection of a patient (P) comprises an implantable medical device (1) configured to measure at least one physiological parameter, a remote monitoring system (2) configured to receive information from the implantable medical device (1), and an information system (3) configured to communicate with said remote monitoring system (2). At least one of the implantable medical device (1), the remote monitoring system (2) and the information system (3) is configured to analyze information relating to said at least one physiological parameter to generate an alert signal for a systemic infection of the patient (P) based on a state of the at least one physiological parameter, wherein at least one of the implantable medical device (1), the remote monitoring system (2) and the information system (3) is further configured to generate an alert message (B4, B5) to be provided to a specified destination based on said alert signal.
