(54) Title: SWING HANDLE ARRANGEMENT WITH A LOCKING FUNCTION

(57) Abstract: The swing handle arrangement according to the invention comprises a locking function. The arrangement comprises a swing handle (1), a frame (2), and a spindle arrangement (3). The swing handle is pivoted to the spindle arrangement, and the spindle arrangement is pivoted to the frame. The swing handle arrangement also comprises an electric actuator (4), a shaft arrangement (5) for the electric actuator, and a latch (6) arranged in the frame (2). The swing handle further comprises a latching surface (7). The latch (6) is arranged to be against the latching surface (7) of the swing handle in the locking position of the swing handle. The latch (6) and the latching surface (7) are thus arranged to lock the swing handle arrangement, which can be unlocked by means of the electric actuator (4) via the shaft arrangement (5) for the electric actuator.
