STERILIZING DEVICE FOR TOOTHBRUSHES

ABSTRACT

A sterilizing device for toothbrushes (16) comprising a germicidal lamp (21) capable of destroying germs and microorganisms depositing on the bristles (35) of toothbrushes (16) during the teeth cleaning operation, which provides for a switch (17) to activate or deactivate the lamp (21), depending on the respective opening or closing of a container (10). The act of opening the container (10) consists in lifting up an upper section or cover (11) of the same, which consequently results, through a transmission mechanism (25) in a gradual tilting of a lower section (12) containing four seats (18) for as many toothbrushes (16), which are thus available to the user.
