

ABSTRACT (FIG. 1)

"GROUP MANAGEMENT SYSTEM OF ELEVATORS"

According to one embodiment, a group management
system of elevators includes a first call registration
5 device (21) configured to register a destination call
and a second call registration device (22) configured
to register an up/down call. A group management
control apparatus (30) includes a wait time actual-
result totalization module (37) configured to totalize
10 a wait time of the destination call, a no-response time
actual-result totalization module (38) configured to
totalize a no-response time of the up/down call, and a
weighting adjustment module (39) configured to adjust
weighting of assignment evaluation, based on an average
15 value of the wait time and an average value of the no-
response time.
