

ABSTRACT

A DOSAGE IN FILM PACKAGE FORM, AN FILM COMPOSITION AND A PROCESS FOR PREPARATION THEREOF

The present disclosure envisages an edible film composition for delivering predetermined amount of at least one edible composition to the oral cavity. The present disclosure also envisages a dosage form comprising the edible composition wrapped within the edible film. Typically, the dosage form comprises at least one edible composition wrapped within at least one layer of an edible film.

The edible film composition disintegrates quickly upon placement in the oral cavity without leaving substantial residue which needs to be swallowed or ejected from the mouth. Typically, the edible composition can be at least one selected from the group consisting of mouth fresheners, mukhwas, mint, chocolate, arica nut, coconut, after-meal snack or digestive aid, confectionery food product, and fennel seeds.

Also envisaged is a process for preparing the edible film composition and the dosage form.
