

ABSTRACT

The present invention provides a seamless capsule that does not soften even in a high-temperature and high-humidity environment, maintains hardness in a tropical zone, etc., and can perceive the breakage of the capsule provided by applying a force to the capsule. The present invention relates to a seamless capsule including a capsule content and a shell layer that coats the capsule content, and a method for producing the same. The shell layer comprises at least deacylated gellan gum and modified starch. The capsule content comprises an oily component.
