

ABSTRACT

Apparatus for the application of a non-solid product.

Apparatus comprising a housing (1) for receiving at least one storage cartridge for the product with a rear thrust wall for the product, a thrust piston (2), drive means comprising a front sprocket (5) for driving the piston (2) by friction, actuated by an intermediate feed rod (6) driven by a motor (3) in a reciprocating motion, and a control lever (4). The drive means are adapted to effect any desired application of the product by one single actuation of the control lever (4).

The invention is very suitable for the application of sealants.
