METHOD FOR PROVIDING UI FOR SUPPORTING TRADING OF UNLISTED STOCKS, AND UNLISTED STOCK TRADING SERVER USING SAME

ABSTRACT

Disclosed is a method for providing a UI for supporting the trading of unlisted stocks, the method comprising the steps in which an unlisted stock trading server (a) supports at least one user terminal in displaying a specific reference price of a specific unlisted stock for a specific unlisted company on a first area of the screen of the user terminal, and (b) supports the trading of the specific unlisted stock by performing at least a portion of: a process for supporting the user terminal in displaying at least one specific purchase order, including at least one specific desired purchase price, on a second area of the screen of the user terminal when the specific purchase order is obtained in a state in which the range of a desired purchase price to be included in a purchase order of the specific unlisted stock is downwardly rigid on the basis of the specific reference price according to a first limitation condition; and a process for supporting the user terminal in displaying at least one specific sell order, including at least one specific desired selling price, on a third area of the screen of the user terminal when the specific sell order is obtained in a state in which the range of a desired selling price to be included in a sell order of the specific unlisted stock is upwardly rigid on the basis of

the specific reference price according to a second limitation condition.
