

ATTACHABLE FORKLIFT FRAME AND METHOD OF USING THE SAME

Abstract

A spreader for a forklift having a pair of forks is described. The spreader being used for the lifting and transporting of oversized goods. The spreader having a platform frame, the frame having a first elongated bar, a second elongated bar disposed parallel to the first elongated bar. The platform frame also having a first side bar and a second side bar each extending from the first elongated bar to the second elongated bar to define a first area. At least two channels extend from the first elongated bar parallel to and between the first and the second side bars. A support frame extends from the first elongated bar perpendicular to the platform frame. A method of using the spreader is also described.
