(54) Title: APPARATUS FOR CAPTURING AN IMAGE

(57) Abstract: An apparatus (1) for capturing an image of a sample retained by a sample acquiring device (7), comprises an image capturing unit (2) comprising a lens arrangement (6) with a fixed focal plane, a sample holder (3) comprising a first magnet unit (10), and a second magnet unit (14). The sample holder (3) is adapted to receive the sample acquiring device (7) and is movable in relation to the lens arrangement (6) to a first position (18). The sample holder (3) is movable from the first position (18) to a second position (19) by means of magnetic interaction of the first magnet unit (10) and the second magnet unit (14), and the image capturing unit (2) is adapted to capture an image of the sample by means of the lens arrangement (6) when the sample holder (3) is in the second position (19).
