

SERVICE PROCESSING METHODS AND APPARATUSES, STORAGE MEDIA, AND ELECTRONIC DEVICES

ABSTRACT

This specification discloses a service processing method and apparatus, a storage medium,
5 and an electronic device. A client device can generate, according to obtained service data, a data
processing request that carries the service data, and send the data processing request to a system
layer. In the system layer, system data that match the service data are determined according to the
service data, then the service data and the system data are input into a data processing model pre-
deployed in the system layer, data processing is performed by using the data processing model,
10 and a data processing result is obtained, so the data processing result is sent to the client device,
and the client device performs service processing according to the data processing result. As such,
data security can be ensured, and data processing result accuracy can be improved, thereby
improving service processing result accuracy.
