(54) Title: METHOD AND SYSTEM FOR ENABLING INTERACTION WITH A PLURALITY OF APPLICATIONS USING A SINGLE USER INTERFACE

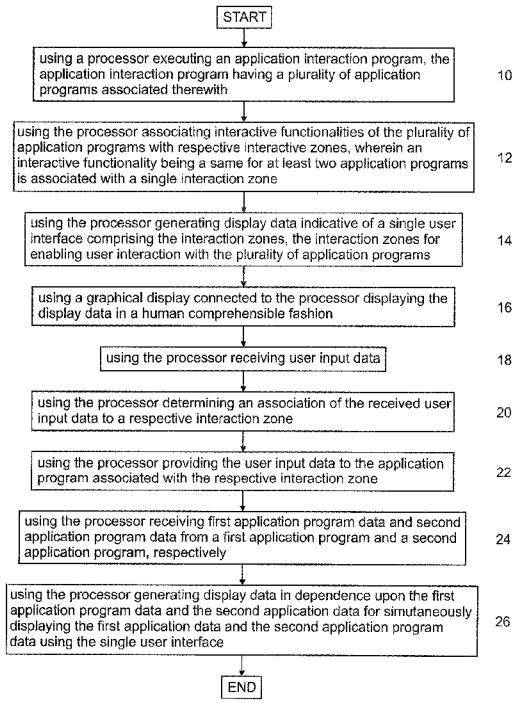

Figure 2

(57) Abstract: A method for simultaneously interacting with a plurality of application programs is provided. Using a processor an application interaction program having a plurality of application programs associated therewith is executed. Interactive functionalities of the plurality of application programs are associated with respective interaction zones. An interactive functionality being a same for at least two application programs is associated with a single interaction zone. Display data indicative of a single user interface comprising the interaction zones are then generated. The interaction zones enable user interaction with the plurality of application programs. Using a graphical display connected to the processor the display data are displayed in a human comprehensible fashion.
