Abstract

[Abstract]

[Problem to be Solved]

To provide a financial product trade managing apparatus to contain occurrence of a loss with fluctuation in a market price and to facilitate gaining a large profit.

[Solution]

A financial product trade managing apparatus includes an order information generating section to generate order information to place a first order and a second order. The first order is set so as to be contracted after the market price passes through a first order price and thereafter reverses the direction of the fluctuation and matches again with the first order price. The second order is set so as to be contracted after the market price passes through a second order price and thereafter reverses the direction of the fluctuation and matches again with the second order price. The second order price is set so as to rise or fall trailing the fluctuation in the market price.
