

COATING MATERIAL APPLICATION DEVICE AND
COATING MATERIAL APPLICATION METHOD

ABSTRACT OF THE DISCLOSURE

5 A coating material application device (2) for
applying a coating material (3) to a core wire (6)
travelling upward includes: a storage tank (8) for
storing the coating material (3) and having an
insertion hole (31) in which the core wire (6) is
10 inserted on its bottom; and a die group composed of at
least three dies including a lower die (12) and a
middle die (14) embedded in the coating material (3)
stored in the storage tank, and an upper die (16)
which projects from a liquid level of the coating
15 material (3) stored in the storage tank, the at least
three dies being arranged at intervals so that the
core wire (6) can sequentially pass through the dies.
