(54) Title: WAKING UP A DEVICE

Fig. 1

(57) Abstract: Method and system for method for communicating between a device and a server, the method comprising the steps of the server initiating device wake-up. Obtaining generic bootstrapping architecture, GBA, push information, GPI, including security credentials or information used to derive the security credentials. Sending a device wake-up message to the device, wherein the device a wake-up message includes the GPI. Authenticating the security credentials within the GPI to obtain a key. Establishing a secure communication channel between the device and the server using the obtained key, wherein the secure communication channel uses a certificate-based protocol and the obtained key is used in place of certificate authentication
