

Spinning Reel for Fishing

[Document Name] Abstract

[Object] To provide a spinning reel for fishing which prevents reduction in the sound making performance and reduces the resistance when the drag is on.

[Solution] The sound maker 20 has convex portions 51 and concave portions 61 formed alternately in the circumferential direction; the concave portion 61 has: a first apex 64 that is an edge between it and one adjacent convex portion 51, a first surface 62 that continues from the first apex 64 and is curved inward in the radially outward direction, a second surface 63 that continues from the first surface 62, and a second apex 65 that continues from the second surface 63 and is an edge between the concave portion 61 and the other adjacent convex portion 51; and a distance L2 from the second apex 65 to the deepest portion 66 of the concave portion 61 is larger than a distance L1 from the first apex 64 to the deepest portion 66 of the concave portion 61.
